

## Short-Term Maintenance Outages (STMO)

For short, opportunistic maintenance outages, (typically carried out at low load periods - overnight or at the weekend), the procedure is as follows:

1. An e-mail request, using the [STMO Request form](#), is submitted to [PSOP@eirgrid.com](mailto:PSOP@eirgrid.com)
2. The feasibility of the outage is assessed by EirGrid on a case-by-case basis.
  - a. If the outage is possible, EirGrid will schedule this outage and send confirmation to the generator with the agreed dates and times.
  - b. If the outage is not possible at the proposed times/ dates, EirGrid will advise the generator of times/ dates that would be possible.
  - c. The generator can then decide either to:
    - i. Submit a new STMO request to EirGrid with revised times. EirGrid can schedule this outage and will send confirmation to the generator with the agreed dates and times.
    - ii. Abandon the plan for the outage.
